

TESTING THE WEB UI

Project : Smart Solutions For Railways

Tracking:

- The python code for detecting the location of the train is made to Run.
- The live status of the train is updated in the IBM Watson IoT Platform and it is further used by the node red application.
- The location is shown in the map via the Node red UI.

QR code:

- By testing the flow designed for generating the QR code, it will generate a unique QR for the passengers who give the required inputs.
- When the passenger gives all the required inputs a dialog box will be displayed as ticket is generated.
- When the passenger is failed to give the required inputs a dialog box will be displayed as Ticket not generated.
