CHAPTER 1

INTRODUCTION

1.1 PROJECT SUMMARY

The largest railway system in Asia is operated by Indian Railways. Additionally, it is the second-largest network in the world run by a single organization. The access of the train, the price of the train, the departure and arrival times of the train, and the ability to book a ticket using a debit, credit, or master card or an upi-id are all available to users in this. If a user wants to cancel a ticket after booking it, they can do so with convenience as well. It has a QR code that holds the customer's information and is useful for the ticket inspector to verify. It has the ability to track trains using a gps system. Online ticket booking has many benefits, including cutting down on paper use and electricity use at the train ticket counter. It also saves time by eliminating the need to wait in a lengthy line. Our railroad reservation system is employed in order to prevent manual errors.

1.2. PURPOSE

A train passenger needs to be aware of the availability of their tickets, the status of their reservations for a certain train or location, the arrival and departure times of their train, any special trains, and the location of their train. Such inquiries cannot be answered during peak hours by the customer information centres at train stations. Less reservation counters are available for customers and travellers. On the majority of reservation systems, it takes a while for anyone to make a reservation. The travellers cannot get assistance from call centres. The goal of the online railway ticket reservation system is to provide a web application that offers customers the option to book tickets online as well as information about available trains.

CHAPTER 2

LITERATURE SURVEY

TITLE: TRACKWARN-AN AI-DRIVEN WARNING SYSTEM FOR RAILWAY
TRACK WORKERS

AUTHOR: M.I.M.Amjath

YEAR OF PUBLICATION: 2021

he analyzed and looked at the train mishaps, hospitalization keep, and so on. It gets in to extra portrayal of insights. The peril of huge injury, in light of separation cosmopolitan, is multiple times greater for travelers travel via car contrasted and travelers going by rail. The mean length of keep in clinic for a transport mishap including a railroad train was four days that were longer than the mean length of save for all External reasons for injury. A train is a set of vehicles, empty or loaded worked by locomotive, or any other self-propelled unit, including light engine/engines or rail-motor vehicles or a single rail-motor vehicle, empty or conveying passengers, live-stock, parcels or goods, which cannot be readily lifted off the track and running under a particular number or a distinct name from fixed point of departure to a fixed destination. Part of a train shall also be treated as a train for the purpose of these definition, classification and statistics. The train engine or any other vehicle once put on the train continues to be a part of the train until the station is reached beyond which it is not required to go on the same train.

DISADVANTAGE:

Slows down the study process.

**TITLE: MONITORING OF THE OPERATING PARAMETERS OF RAILWAY
SYSTEMS THROUGH THE USE OF SMARTPHONE DETECTION
TECHNOLOGIES**

AUTHOR: Francesco Apicella

YEAR OF PUBLICATION: 2021

Our cities are becoming increasingly smart thanks to information and communication technologies, sustainable solutions for human activities and innovative mobility frameworks. In this context, one of the most promising approaches is relying on the Internet of Things (IoT) which allows objects of everyday life to become computing devices exchanging useful data. In particular, the paper proposes to adopt such technologies for monitoring railway systems, thus obtaining information concerning, on one hand, service performance and, on the other, travellers behaviour. A numerical application has been performed in a real rail context, thus pointing out the feasibility of the proposed methodology. Improving safety by early warning of distress in or impending failures in wheels and wheel bearings. Using the vibration signature of the same sensors that are strategically placed on unsprung mass to do track condition monitoring too to indicate deterioration in the health of tracks thereby avoiding sudden failures in service.

DISADVANTAGE:

Rail transport cannot provide door to door service as it is tied to a particular track. Intermediate loading or unloadings involves greater cost, more wear and tear and wastage of time.

2.1 EXISTING SYSTEM

A GSM and GPS module were used to pinpoint the exact location of the defective tracks so that the authorities could be notified via SMS and sent a link to view the area on Google Maps. A prototype that can take pictures of the track, compare them to an older database, and alert the authorities of a breach in the surface was presented by Rizvi Aliza Raza. Table provides a thorough examination of conventional railway track defect detecting methods.

2.3 PROBLEM STATEMENT DEFINITION

In a train a ticket is issued by a railway operator that allows users to travel on the railway . User can use tickets to travel on a specific route at a specific time. The introduction of manual ticketing has always made it easier for authorities to keep track of various events involving financial matters and people's travelling patterns. These activities, however, had to be carried out manually, requiring a large amount of manpower and resources. The use of electronic equipment such as computers, printing machines, paper, and ink are the primary and most important resources required for paper ticketing systems.

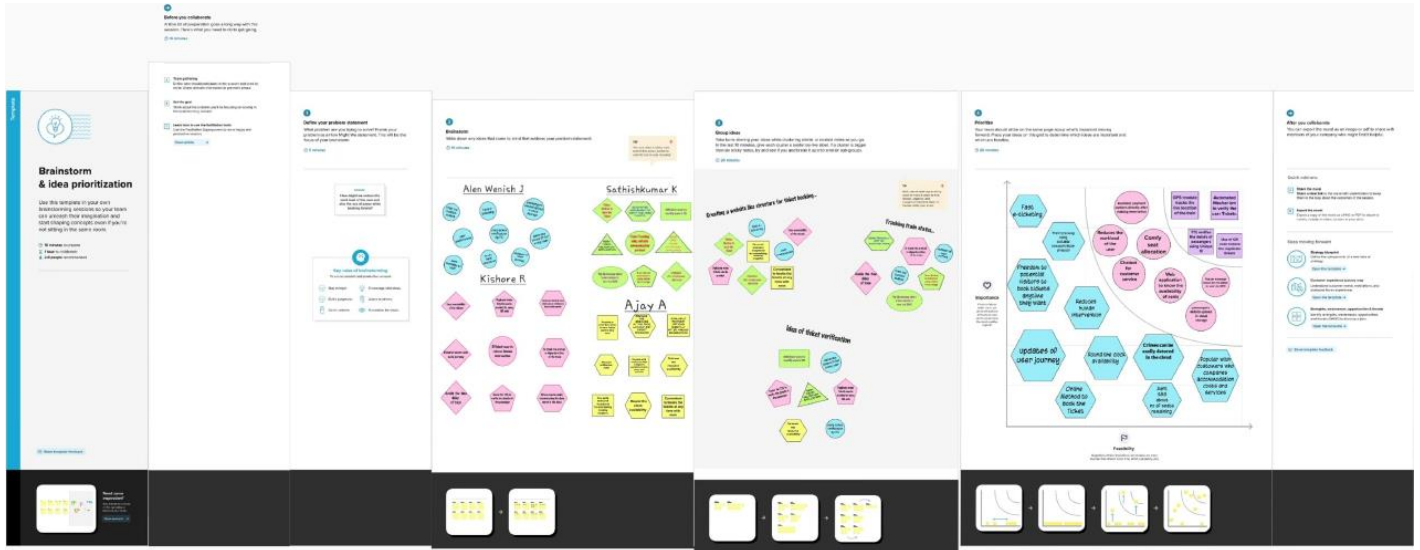

CHAPTER 3

IDEATION AND PROPOSED SOLUTION

3.1 EMPATHY MAP CANVAS

3.2 IDEATION & BRAINSTORMING

3.3 PROPOSED SOLUTION

| S.No. | Parameter | Description |
|-------|--|---|
| 1. | Problem Statement (Problem to be solved) | Smart Solutions for railways is designed to reduced the work load of the user and also the use of paper |
| 2. | Idea / Solution description | A Web UI is designed to enable online ticket booking and a QR code is generated for the user who has booked the ticket to verify it with Travelling Ticket Examiner (TTE) which is done using Cloud Service . |
| 3. | Novelty / Uniqueness | <ul style="list-style-type: none"> Unique QR code for each user to verify their Tickets by Ticket Checker. GPS Module to track the location of Train and live status is updated in the Web app . |
| 4. | Social Impact / Customer Satisfaction | <ul style="list-style-type: none"> GPS Module to track the location of Train and live status is updated in the Web app . The location of the train is updated periodically in the web app so customers can easily track the status of the train which may help the customer to arrive on time . |
| 5. | Business Model (Revenue Model) | <ul style="list-style-type: none"> Selling a Product which enables online booking platform and automatic verification system would fetch more revenues to the Organisation , also the Online Platform has to be maintained continuously and so , the business will sustain and can be improved if required . |
| 6. | Scalability of the Solution | <ul style="list-style-type: none"> a QR code is generated to hold the unique data of user in cloud , and a GPS module is attached to lot platform inorder to monitor the train location which gives an additional tracking mechanism to ensure reliability . We propose a solution which works on the SaaS (Software as a Service) cloud model wherein all necessities are deployed in the web browser which gives an easy access and also the cost is minimal which gives a scaled solution approach . |

3.4 PROBLEM SOLUTION FIT

| | | | | |
|-------------------------|--|---|---|---|
| Define CS, fit into CL | 1. CUSTOMER SEGMENT(S) CS <p>Customers are</p> <ul style="list-style-type: none"> • Functional traveler • Day tripper • Train lover • Leisure-hedonic traveler | 6. CUSTOMER LIMITATIONS CL <p>Not all online booking systems are created equally. When choosing a provider that offers poor customer service or only a few features available might be frustrating to the customer especially when you're ready to grow your business.</p> | 5. AVAILABLE SOLUTIONS AS <p>When getting wait listed tickets,</p> <ul style="list-style-type: none"> • Book ticket from an earlier station but still travel on your desired route • Book ticket to a later station but still travel on your desired route. | Explore AS, differentiate |
| | 2. PROBLEMS / PAINS PR <ul style="list-style-type: none"> ➤ Passengers invest a lot of time in booking tickets at the counter every time they wish to have a train travel ➤ Business men and travelers often face anxiety upon not knowing the exact arrival of train ➤ TTE has to process huge paperwork to verify passenger tickets | 9. PROBLEM ROOT / CAUSE RC <ul style="list-style-type: none"> ➤ Because of no online facility to book tickets from the place where users are. ➤ Delay occurs in the arrival and departure schedules of a train and there is no proper tracking mechanism to notify the travelers where the train is presently. ➤ No mechanism to verify user identity wherein everything is maintained in paper records. | 7. BEHAVIOR BE <ul style="list-style-type: none"> ➤ Users try to book tickets via some agency ➤ Often enquire the helpdesk to know when the train will arrive ➤ TTE tries to have soft copy of passenger details in order to decrease paperwork | Focus on PR, tap into BE, understand RC |
| Identify strong TR & EM | 3. TRIGGERS TO ACT TR <p>Railway passengers see their neighbours easily booking tickets without having to wait in long lines.</p> | 10. YOUR SOLUTION SL <p>A web UI, which can be used on any common device, is designed to enable online ticket booking, and a QR code is generated for the user who booked the ticket to verify it with a travelling ticket examiner(TTE),thereby reducing both the workload of the user and the paperwork of the TTE.</p> | 8. CHANNELS of BEHAVIOR CH <p>ONLINE</p> <p>Passengers will check on various platforms to book their tickets easily. TTE maintain details in soft copy.</p> | Extract online & offline CH of BE |
| | 4. EMOTIONS EM <small>BEFORE / AFTER</small> <p>Previously, users perceived that task of booking ticket was time-consuming . After using an online method to book tickets at their own pace and time gives convenience.</p> | | <p>OFFLINE</p> <p>Passengers compare different agencies to book their tickets easily. TTE will try to have passenger details in hard copy</p> | |

CHAPTER 4

REQUIREMENT ANALYSIS

4.1. FUNCTIONAL REQUIREMENTS

| FR No. | Functional Requirement (Epic) | Sub Requirement (Story / Sub-Task) |
|--------|-------------------------------|---|
| FR-1 | User Registration | Before the user registration there will be language selector .All the language is applicable .When user enter in to the website they can see the page which shows enter the email-id ,mobile number and name. After that in screen it shows the verification code which will be sent to the email-id. |
| FR-2 | User verification | The verification code is send to the registered email id. |
| FR-3 | User confirmation | The verification code is entered in to the website. After finishing that home page is opened. |
| FR-4 | Process of booking | When the home page is opened there will be a From and To options. We must enter the details then after that we can able to see the number of trains availability and seats availability. We can select the particular train and particular seats which we need and click the confirm option. |
| FR-5 | Payment process | After entering all the details select the payment option like UPI apps , Net-banking , etc., When we select the comfortable method then it process through selected payment option then payment can be done carefully and securely, then the ticket will be confirmed. After confirmation it will return to the page and we can see the details of booking. |
| FR-6 | Confirmation message | After all the process has been completed the QR code will be send to both mobile number(via SMS) and email id. QR code will be shown to the ticket collector where all the booking details can be viewed by scanning the QR code. |

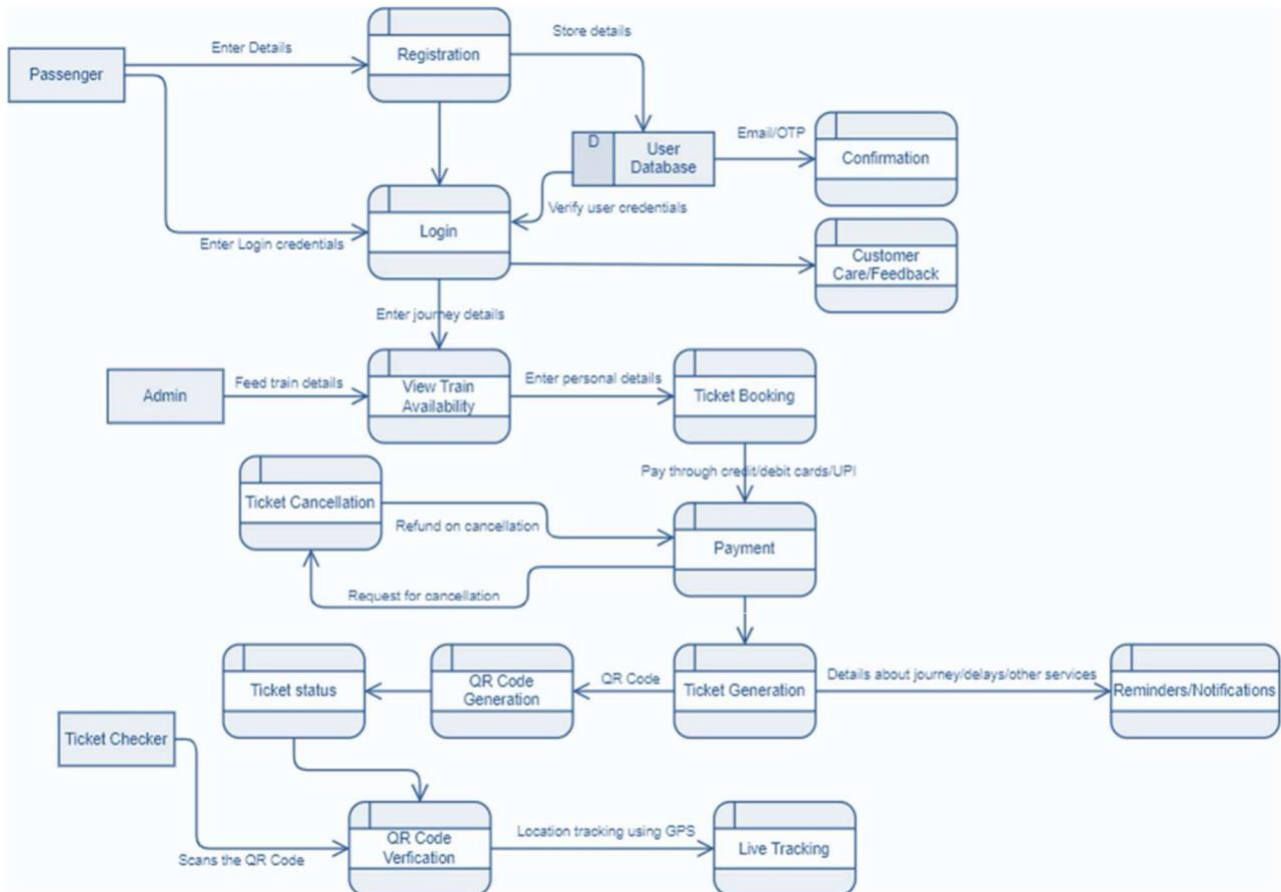

4.2. NON-FUNCTIONAL REQUIREMENTS

| FR No. | Non-Functional Requirement | Description |
|--------|----------------------------|---|
| NFR-1 | Usability | This website is a set of easy methods so there will be no difficulties of operating it. All the languages can be accessed through by user. |
| NFR-2 | Security | The permission required is only the access of location and there won't be any other unauthorized permission needed. |
| NFR-3 | Reliability | If the network connection is disabled While entering the details of user no worries you no need to enter the details again as all the details will be stored automatically. |
| NFR-4 | Performance | The website is more secured and it will obtain through the back end. unauthorized person can't access the website. |
| NFR-5 | Availability | only the QR code is sendd through the message and email id only no other information is included |
| NFR-6 | Scalability | At a time more than 300,000 users can obtain .All the data will be stored carefully without any issues. |

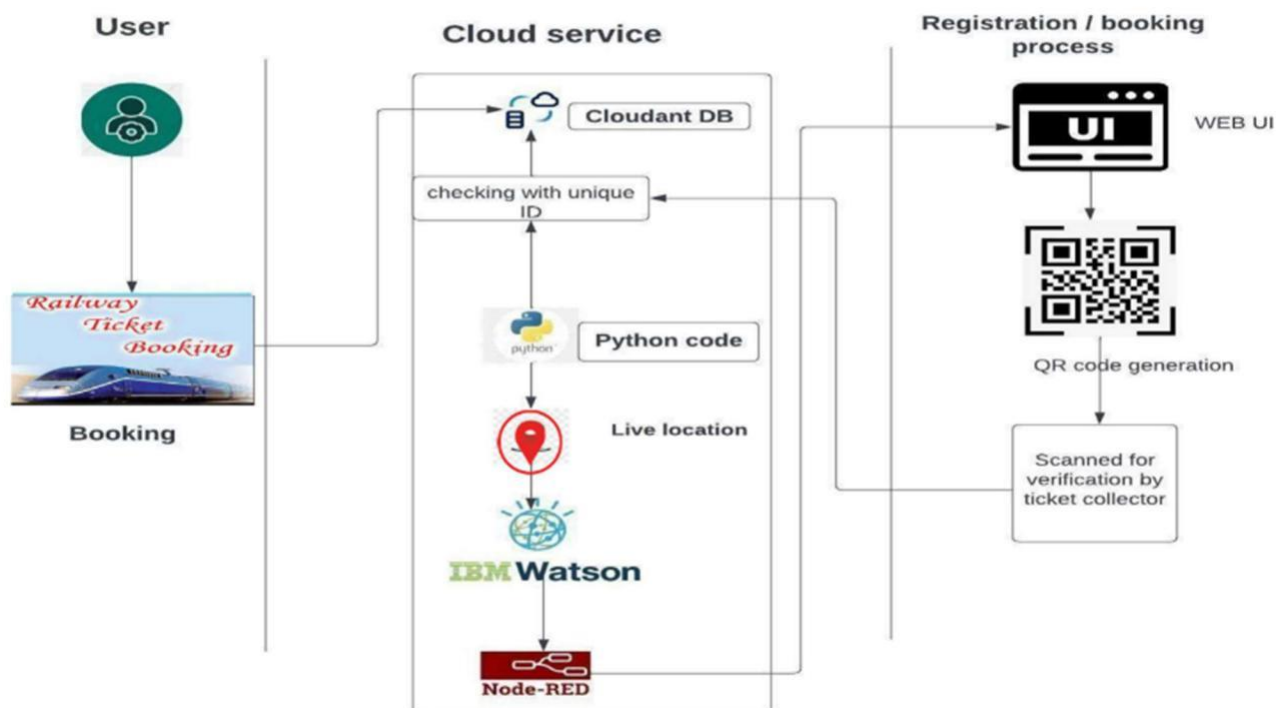

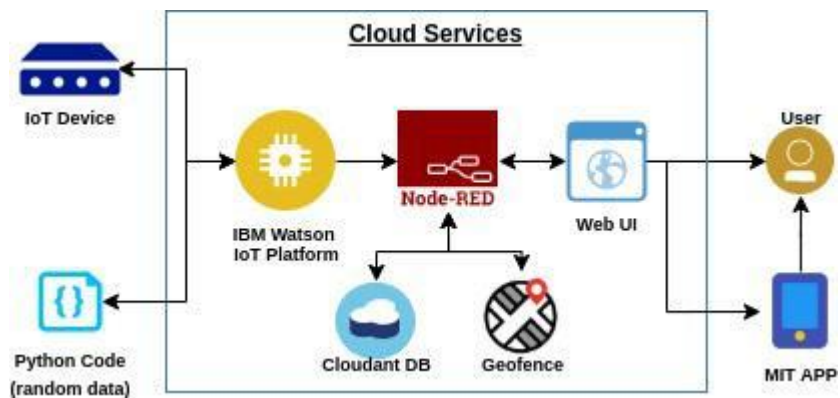

CHAPTER 5

PROJECT DESIGN

5.1 DATA FLOW DIAGRAMS

5.2 SOLUTION & TECHNICAL ARCHITECTURE

5.3 USER STORIES

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|-------------------------------------|-------------------------------|-------------------|--|--|----------|----------|
| Customer (Mobile user, Web user) | Registration | USN-1 | As a user, I can register through the form by Filling in my details | I can register and create my account / dashboard | High | Sprint-1 |
| | | USN-2 | As a user, I can register through phone numbers, Gmail, Facebook or other social sites | I can register & create my dashboard with Facebook login or other social sites | High | Sprint-2 |
| | Conformation | USN-3 | As a user, I will receive confirmation through email or OTP once registration is successful | I can receive confirmation email & click confirm. | High | Sprint-1 |
| | Authentication/ Login | USN-4 | As a user, I can login via login id and password or through OTP received on register phone number | I can login and access my account/dashboard | High | Sprint-1 |
| | Display Train details | USN-5 | As a user, I can enter the start and destination to get the list of trains available connecting the above | I can view the train details (name & number), corresponding routes it passes through based on the start and destination entered. | High | Sprint-1 |
| | Booking | USN-6 | As a use, I can provide the basic details such as a name, age, gender etc... | I will view, modify or confirm the details enter. | High | Sprint-1 |
| | | USN-7 | As a user, I can choose the class, seat/berth. If a preferred seat/berth isn't available I can be allocated based on the availability. | I will view, modify or confirm the seat/class berth selected | High | Sprint-1 |
| | | USN-9 | As a user, I will be redirected to the selected Payment gateway and upon successful | I can pay through the payment portal and confirm the booking if any changes need to | High | Sprint-1 |

| User Type | Functional Requirement (Epic) | User Story Number | User Story / Task | Acceptance criteria | Priority | Release |
|-----------|-------------------------------|-------------------|--|--|----------|----------|
| | | | completion of payment I'll be redirected to the booking website. | be done I can move back to the initial payment page | | |
| | Ticket generation | USN-10 | As a user, I can download the generated e-ticket for my journey along with the QR code which is used for authentication during my journey. | I can show the generated QR code so that authentication can be done quickly. | High | Sprint-1 |
| | Ticket status | USN-11 | As a user, I can see the status of my ticket Whether it's confirmed/waiting/RAC. | I can confidentially get the Information and arrange alternate transport if the ticket isn't Confirmed | High | Sprint-1 |
| | Reminders notification | USN-12 | As a user, I get reminders about my journey A day before my actual journey. | I can make sure that I don't miss the journey because of the constant notifications. | Medium | Sprint-2 |
| | | USN-13 | As a user, I can track the train using GPS and can get information such as ETA, Current stop and delay. | I can track the train and get to know about the delays pian accordingly | Medium | Sprint-2 |
| | Ticket cancellation | USN-14 | As a user, I can cancel my tickets if there's any Change of plan | I can cancel the ticket and get a refund based on how close the date is to the journey. | High | Sprint-1 |

CHAPTER 6

PROJECT PLANNING AND SCHEDULING

6.1. SPRINT PLANNING& ESTIMATION

| Sprint | Functional Requirement (Epic) | User Story Number | User Story / Task | Story Points | Priority | Team Members |
|----------|---|-------------------|---|--------------|----------|--------------|
| Sprint-1 | Dashboard | USN-4 | Displaying User the Services we provide in Application | 2 | Medium | Overall Team |
| Sprint-2 | Overall UI | USN-5 | Non functional overall UI developed for User convenience | 2 | High | Overall Team |
| Sprint-2 | Backend development and QRcode generation | USN-6 | Giving User the semi functional UI of the Application | 2 | High | Kishore R |
| Sprint-2 | Connecting Application with Cloud | USN-7 | User can experience the semi functional working of the data(from cloud) with Application | 2 | Medium | Kishore R |
| Sprint-3 | Connecting Devices/Gateways withCloud | USN-8 | User can experience the semi functional working of lotdevice connected with Application | 2 | Medium | Overall Team |
| Sprint-3 | Full functional UI | USN-9 | Giving User the full functional UI of the Application with supported backended | 2 | High | Overall Team |
| Sprint-4 | Debug and Testing | USN-10 | Testing has been done for finding debugs | 2 | High | Overall Team |
| Sprint-4 | Testing and Deployment | USN-11 | Final Testing for Deployment | 2 | High | Overall Team |

6.2. SPRINT DELIVERY SCHEDULE

| Sprint | Total Story Points | Duration | Sprint Start Date | Sprint End Date (Planned) | Story Points Completed (as on Planned End Date) | Sprint Release Date (Actual) |
|----------|--------------------|----------|-------------------|---------------------------|---|------------------------------|
| Sprint-1 | 6 | 6 Days | 25 Oct 2022 | 29 Oct 2022 | To be Updated(to be 6) | 29 Oct 2022 |
| Sprint-2 | 6 | 6 Days | 30 Oct 2022 | 07 Nov 2022 | To be Updated (to be 6) | 07 Nov 2022 |
| Sprint-3 | 4 | 6 Days | 09 Nov 2022 | 12 Nov 2022 | To be Updated (to be 4) | 12 Nov 2022 |

CHAPTER 8

TESTING

8.1.TEST CASES

| Test case ID | Feature Type | Component | Test Scenario | Pre-Requisite | Steps To Execute | Test Data | Expected Result | Actual Result | Status | Comments | TC for Automation |
|--------------|--------------|-----------------------|--|---------------|---|--|--|---------------------|--------|----------|-------------------|
| 1 | Functional | Registration | Registration through the form by filling in my details | | 1.Click on register 2.Fill the registration form 3.click Register | | Registration form to be filled is to be displayed | Working as expected | Pass | | |
| 2 | UI | Generating OTP | Generating the otp for further process | | 1.Generating of OTP number | | user can register through phone numbers, Gmail, Facebook or other social sites and to get otp number | Working as expected | pass | | |
| 3 | Functional | OTP verification | Verify user otp using mail | | 1.Enter gmail id and enter password 2.click submit | Username: abc@gmail.com password: Testing123 | OTP verified is to be displayed | Working as expected | pass | | |
| 4 | Functional | Login page | Verify user is able to log into application with Invalid credentials | | 1.Enter into log in page 2.Click on My Account dropdown button 3.Enter Invalid username/email in Email text box 4.Enter valid password in password text box 5.Click on login button | Username: abc@gmail.com password: Testing123 | Application should show 'Incorrect email or password' validation message. | Working as expected | pass | | |
| 5 | Functional | Display Train details | The user can view about the available train details | | 1.As a user, I can enter the start and destination to get the list of trains available connecting the above | Username: abc@gmail.com password: Testing123678686786876876 | A user can view about the available trains to enter start and destination details | Working as expected | fail | | |

| Feature Type | Component | Test Scenario | Pre-Requisite | Steps To Execute | Test Data | Expected Result | Actual Result | Status | Comments | TC for Automation(V/N) | BUG ID |
|--------------|---------------|---|---------------|--|-----------|---|---------------------|--------|----------|------------------------|--------|
| Functional | Booking | user can provide the basic details such as a name, age, gender etc | | 1.Enter method of reservation 2.Enter name,age,gender 3.Enter how many tickets wants to be booked 4.Also enter the number member's details like name,age,gender | | Tickets booked to be displayed | Working as expected | Pass | | | |
| UI | Booking seats | User can choose the class, seat/berth. If a preferred seat/berth isn't available I can be allocated based on the availability | | 1.known to which the seats are available | | known to which the seats are available | Working as expected | pass | | | |
| Functional | Payment | user, I can choose to pay through credit Card/debit card/UPI. | | 1.user can choose payment method 2.pay using tht method | | payment for the booked tickets to be done using payment method through either the following methods credit Card/debit card/UPI. | Working as expected | pass | | | |
| Functional | Redirection | user can be redirected to the selected | | 1.After payment the use will be redirected to the previous | | After payment the use will be redirected to the previous page | Working as expected | pass | | | |

| Test case ID | Feature Type | Component | Test Scenario | Pre-Requisit | Steps To Execute | Test Data | Expected Result | Actual Result | Status | Comments | TC for Autom | BUG ID |
|--------------|--------------|-----------------------|--|--------------|--|-----------|---|---------------------|--------|----------|--------------|--------|
| 10 | Functional | Ticket generation | a user can download the generated e ticket for my journey along with the QR code which is used for authentication during my journey. | | 1.Enter method of reservation 2.Enter name,age,gender 3.Enter how many tickets wants to be booked 4.Also enter the number member's details like name,age,gender | | Tickets booked to be displayed | Working as expected | Pass | | | |
| 11 | UI | Ticket status | a user can see the status of my ticket Whether it's confirmed/waiting/RAC | | 1.known to the status of the tickets booked | | known to the status of the tickets booked | Working as expected | pass | | | |
| 12 | Functional | reminder notification | a user, I get reminders about my journey A day before my actual journey | | 1.user can get reminder notification | | user can get reminder notification | Working as expected | pass | | | |
| 13 | Functional | GPS tracking | user can track the train using GPS and can get information such as ETA, Current stop and delay | | 1.tracking train for getting information | | tracking process through GPS | Working as expected | pass | | | |

CHAPTER 9

RESULTS

9.1.PERFORMANCE METRICS

The screenshot shows a web browser displaying a Node-RED dashboard. The form includes fields for Boarding Station (Namakkal), Destination (Salem), and a QR Code. A modal dialog box is open, displaying the message "Ticket is Generated/Reserved" with OK and CANCEL buttons. The form also has a "Details" section with fields for Name, Age, and Mobile Number, and buttons for "Clear" and "CLEAR".

Ticket information

Train Tracking:

CHAPTER 10

ADVANTAGES & DISADVANTAGES

10.1. ADVANTAGES

- o Openness – compatibility between different system modules, potentially from different vendors;
- o Orchestration – ability to manage large numbers of devices, with full visibility over them;
- o Dynamic scaling – ability to scale the system according to the application needs, through resource virtualization and cloud operation;
- o Automation – ability to automate parts of the system monitoring application, leading to better performance and lower operation costs.

10.2. DISADVANTAGES

- o Approaches to flexible, effective, efficient, and low-cost data collection for both railway vehicles and infrastructure monitoring, using regular trains;
- o Data processing, reduction, and analysis in local controllers, and subsequent sending of that data to the cloud, for further processing;
- o Online data processing systems, for real-time monitoring, using emerging communication technologies;
- o Integrated, interoperable, and scalable solutions for railway systems preventive maintenance.

CHAPTER 11

CONCLUSION

Online railway ticket reservation system was successfully designed and developed as per the specifications. We have created a project to make the user and the worker to reduce the time consumption for the issue and buy a ticket. It is also reduce the fear of lost the ticket .from this project we will generate the qrcode it is more helpful to have all details in the qrcode itself. While ticket checker scan the qrcode,it will show all detail about the passenger and the details of the ticket .

CHAPTER 12

FUTURE SCOPE

In future CCTV systems with IP based camera can be used for monitoring the visual videos captured from the track. It will also increase security for both passengers and railways. GPS can also be used to detect exact location of track fault area, IP cameras can also be used to show fault with the help of video. Locations on Google maps with the help of sensors can be used to detect in which area track is over.
